

ADSEC GROUP SECURITY ENVIRONMENTAL POLICY

ADSEC GROUP Security aim to continuously improve the impact our provision of Service has on the environment.

We recognise that compliance with ISO14001 as a minimum level of performance. We strive to educate and train our staff in environmental issues and the environmental effects of their activities

Annual monitoring and review of our environmental policy will ensure we remain focused on improving our environmental practices.

In respect of transport all our company vehicles are hybrids to reduce our impact on the environment through greater fuel economy and CO2 emissions. We actively encourage the use of public transport throughout our organisation, by providing Oyster cards for supervisory and area management staff.

All packaging, i.e. cardboard and plastic and metal is recycled through local agents.

FSC Our paper supply is from well managed forests and other sustainable sources and all paper used is recycled, even shredded paper is sent to a local 3rd party company for re-use.

We use email where possible as an alternative to snail post and plan to use the following new initiatives: Slates/Notebooks to be used to reduce reliance on paper for site audits, holiday requests, uniform requests, appraisals, change of address and bank details, ad hoc paperwork, CSQ. Communication with our clients, consumers and staff is via email where possible.

We have reduced our H&S policy of 46 pages to a one page statement, advising staff that our full H&S Policy is at Head Office or online in the staff area at www.adsec.co.uk this includes Company policies and documents, that are available to read or download.

Ink cartridges returned to manufacturers for recycling upon end of use.

Glass plastics and all recyclable materials are collected and recycled at a local centre

Our new offices have light sensors ensuring that all lighting goes off after a short time span in unused areas; we use this system throughout the building even in the public areas.

Our hot water and heating systems are ecologically friendly, and work based on the outside temperature, coming on only when the inside temperature drops below 22 degrees.

Our environment policy is included in our initial training of staff and our Operations Manuals on site, and on our website. We instil into our management and operational staff the importance of caring for our environment, and hope that together we can all make an impact.

ADSEC GROUP WE CARE FOR OUR ENVIRONMENT
